KEY ACHIEVEMENTS

 **Testing pyramid like coverage in project**
In my project, I took personal responsibility for controlling and writing integration tests, addressing a common challenge in testing frameworks. It is known that the best approach in test coverage is testing pyramid. But typically, unit and integration tests are written by developers, making them inaccessible to testers. To overcome this limitation, I dived into learning Spring and the structure of microservices applications. By taking ownership of integration testing, I significantly reduced the reliance on end-to-end tests.

 **QA automation mentoring**
I've trained QA engineers to become automation engineers
